EDUCATION

CMR Institute of Technology <i>B.E. in Artificial Intelligence and Machine Learning</i>	Bangalore, India Dec 2022 - July 2026
Kendriya Vidyalaya NAL Campus <i>Senior Secondary</i>	Bangalore, India June 2020 - June 2022

EXPERIENCE

Zetheta Algorithms Private Limited <i>Data Science Intern</i>	Oct 2025 - Dec 2025 Remote
- Developed a cross-domain AI pipeline integrating computational material science datasets (AFLOW, Materials Project, NIST) with commodity and infrastructure financial data to model material-driven financial risk and asset valuation. - Implemented advanced ML architectures including Crystal Graph Neural Networks (CGNNs) for crystal structure representation and Physics-Informed Neural Networks (PINNs) to enforce physical constraints in material property prediction. - Built a deep survival analysis model (DeepSurv) and engineered cross-domain features linking material properties (fatigue life, corrosion rate, tensile strength) with financial indicators to estimate infrastructure remaining useful life (RUL), credit risk metrics, and commodity risk signals.	
Learner's Byte <i>AI Intern</i>	Jan 2026 - April 2026 Remote
- Built LLM-powered applications using Python and modern GenAI frameworks, implementing prompt engineering, structured output generation, and API-based model integration for automated text generation and analysis workflows. - Developed Retrieval-Augmented Generation (RAG) pipelines using vector embeddings and semantic search to enable context-aware question answering and knowledge retrieval from unstructured documents. - Implemented LLM evaluation and optimization workflows including prompt tuning, response validation, and hallucination mitigation to improve reliability and performance of generative AI systems.	

PROJECTS

Automated Machine Learning Pipeline Python, Streamlit, Scikit-learn, Pandas, NumPy
- Engineered an end-to-end ML pipeline supporting classification, regression, and clustering using Scikit-learn. - Automated data preprocessing, feature engineering, and model selection using cross-validation techniques. - Enabled dynamic dataset input and improved model selection efficiency through an interactive Streamlit interface.
DevConnect – Developer Collaboration Platform React, Vite, JavaScript
- Built a collaborative platform enabling developers to manage projects, share code, and streamline teamwork. - Developed a responsive frontend using React with Vite, leveraging component-based architecture for scalability. - Implemented fast development workflows with Hot Module Replacement (HMR) and optimized build tooling. - Structured reusable UI components to enhance maintainability and improve user interaction.
Store Demand Forecasting using Time-Series & Neural Networks Python, TensorFlow, Pandas, NumPy
- Designed a time-series forecasting system using neural networks and advanced feature engineering (lag features, rolling statistics). - Modeled seasonality and trend patterns to enhance demand prediction accuracy. - Optimized model performance using MAE and RMSE, ensuring robust predictions on temporal data. - Analyzed historical sales data to generate accurate future demand predictions for improved decision-making.

SKILLS

Languages: Java, Python, C, SQL, JavaScript, HTML, CSS
Machine Learning: Scikit-learn, TensorFlow, PyTorch, Time-Series Forecasting, Feature Engineering
Data Analysis: Pandas, NumPy, EDA, Data Preprocessing
Tools & Technologies: Git, GitHub, Jupyter Notebook, VS Code, Linux, Streamlit, HMR
Cloud: AWS (EC2, S3), GCP (Compute Engine, Cloud Storage)

ACHIEVEMENTS

- Winner of AI-Thon 2025 conducted by BITS-Pilani
- Odoo x Adani University Hackathon '26
- Visa 24hrs AI Hackathon (Indian Institute of Technology, Madras)
